Krystal Planet announces educational wind turbine program

(Lenexa, Kansas, January 9, 2006) – **Krystal Planet Corporation**, an ENERGY STAR Partner, announces today its plans to construct at least three educational wind turbines at schools in the United States this year. Three schools will be selected by reviewing applications from interested school administrators. The first three wind turbines will be installed at a school in the Midwest, east coast, and west coast. These wind turbines will save money on electricity for the schools, provide a hands-on clean power learning experience for kids in science classes, and demonstrate the viability and affordability of wind energy technologies.

The wind turbines to be installed will be the largest available from Southwest Windpower at the time of installation (www.windenergy.com). The first wind turbine is expected to be installed in the Kansas City area by March 31st, pending final zoning approval. Krystal Energy Corporation, Krystal Planet's parent company, will pay for 100% of the cost of the turbine, related equipment, and installation. The school will pay a discounted rate for the electricity it produces (where allowed by law) or a modest lease payment. These funds, after expenses, will be used to develop additional wind turbines and further support The Freedom Plan, a method to convert America to 100% clean power in 10 years.

For every customer of the FutureWindSM Green Power Certificate (GPC), Krystal Planet donates a minimum of 16% on their behalf to construct a new wind turbine to reduce greenhouse gases and pollution from burning fossil fuels at conventional power plants. The GPCs (also known as Green Tags) from that wind turbine can be sold to others in the community to expand the program by adding additional wind turbines or solar panels at the school.

“We are thrilled to provide these educational and environmental benefits, as well as cost savings, to schools across America. Although these wind turbines are smaller than utility-scale turbines, we can install them much faster with a greater impact. Plus, the energy savings will presumably go right back into the classroom” says Troy Helming, founder and CEO. “A number of schools have expressed interest in the program and hope to provide turbines to all of them as our FutureWindSM customer base grows.”

About Krystal Planet Corporation

Krystal Planet Corporation, headquartered in the Kansas City area is a leading marketer of clean power products. Effective grass-roots marketing teaches consumers how to ‘Krystalize’ their homes and vehicles, saving \$150 per month (\$1,800 per year for many years) on energy bills while reducing pollution. America's 1st national network of energy efficiency experts offers wind, solar, hydrogen, bio-fuels and energy-saving products (some of which are not available anywhere else). Examples include the Krystal Hydrogen System (the world's 1st turnkey hydrogen system), and FutureWindSM (a Green Power Certificate that helps build wind turbines at schools). All sales contribute to [The Freedom Plan](#) (described in the book [The Clean Power Revolution](#)) which can convert America to 100% clean energy in 10 years. Krystal Planet has helped eliminate 4 Million pounds of greenhouse gases since Earth Day 2004. On the web at www.krystal-planet.com.
